DIGITAL LITERACY

PROJECT REPORT

Name: **Faleha Karim**

Reg no.: **25BCE11264**

Branch: **CSE Core**

Year: **2025-2029**

Course Code: **CSE0001**

DATE: **31/03/2026**

Introduction

The Digital Literacy Project was assigned to develop essential skills required for effective use of digital technologies. As a Student Digital Ambassador, the objective was to create awareness about digital tools, online safety, and professional communication. This project involved creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, learning email etiquette, and understanding cybercrime awareness. Through these tasks, I learned how to use platforms like GitHub, LinkedIn, and Google Forms. The project also helped me understand the importance of maintaining a professional online presence and using the internet safely. Overall, this project enhanced my digital skills and prepared me for academic and professional environments.

Task 1: Digital Literacy Infographic

I created a digital literacy awareness infographic using Canva. The purpose of the infographic was to present important concepts of digital literacy in a simple and visually appealing manner. The design includes topics such as the meaning of digital literacy, safe internet practices, useful digital tools, professional online presence, and email etiquette.

I specified safe practices like using strong passwords, avoiding suspicious links, and not sharing personal information. I also included tools such as Google Drive, GitHub, and Google Docs that are useful for students. Additionally, the infographic emphasizes maintaining a professional online identity and proper email communication.

While creating the infographic, I faced difficulty in organizing multiple topics within a single page without making it messy , and making it easy and understandable . However, it was interesting to explore Canva's design features such as templates, icons, and layouts. This task helped me understand how visual content can effectively communicate important digital concepts.

Task 2: Digital Portfolio

In this task, I created and updated my profiles on GitHub and LinkedIn to build a professional digital presence. GitHub is a platform used to store and manage coding projects, while LinkedIn is a professional networking platform used to connect with peers and industry professionals.

On GitHub, I created a profile README including my basic details such as my name, branch, and learning goals. On LinkedIn, I updated my education details, including my current degree in Computer Science Engineering at VIT Bhopal University.

These platforms will be highly useful in the future for showcasing my projects, building connections, and applying for internships. Over the next four years, I plan to regularly update my profiles, add projects, and engage with professional communities. This task helped me understand the importance of having a strong digital presence.

Task 3: Platforms Exploration

For this task, I explored both coding practice platforms and collaboration tools. For the coding part, I used HackerRank and completed a beginner-level problem. This helped me understand how coding challenges work and improved my logical thinking and problem-solving skills.

For the collaboration part, I created a Google Form consisting of five questions related to digital literacy awareness. The form included multiple-choice and short-answer questions. I also viewed the responses in Google Sheets, which helped me understand how data is collected and analyzed.

These platforms are very useful for academic purposes. Coding platforms help in improving programming skills, while tools like Google Forms are useful for surveys and quizzes. This task provided practical exposure to tools that will be helpful in my academic journey.

Task 4: Email Etiquette and Communication

In this task, I learned the importance of professional communication through email. I drafted two emails—one requesting an assignment extension and another applying for an internship. Both emails followed proper structure, including a subject line, greeting, body, and closing.

I also created a social media Do’s and Don’ts checklist to promote responsible online behavior. Poor digital communication can create misunderstandings and leave a negative impression. For

example, sending an email without a proper subject or greeting may appear unprofessional. This task helped me understand how to communicate clearly and professionally in academic and professional settings.

For example, a student once sent an email to a professor without a subject line or proper greeting, which caused confusion and delayed the response. This situation could have been avoided by following proper email etiquette and maintaining a clear structure.

Task 5: Cybercrime Awareness

For this task, I studied phishing as a type of cybercrime. Phishing involves sending fake emails or messages to trick users into sharing personal information such as passwords or bank details.

I also created a prevention checklist that includes tips such as avoiding suspicious links, using strong passwords, and verifying sources before sharing information. I learned that cybercrime is very common and can affect anyone. This task made me more aware and cautious while using the internet, and convinced me to follow safe practices to protect my data.

What surprised me most was how easily people fall victim to phishing attacks due to lack of awareness. As a result, I will make a habit of always verifying links and emails before clicking on them.

Conclusion

This project provided valuable knowledge about digital literacy and its practical applications. I learned how to use different digital tools, maintain a professional online presence, communicate effectively, and stay safe online. The tasks helped me develop essential skills that will be useful throughout my academic journey and future career. Overall, this project increased my confidence in using digital platforms responsibly and efficiently.
